

# ByBox delivers safer post

ByBox has launched an electronic postal locker with enhanced security features, including sensors that detect tampering or break-ins.

Lockers are available in several standard dimensions that will handle post ranging from letters up to large parcels.

User security data may be monitored in several different ways, using signature capture, web camera and biometrics techniques such as fingerprint recognition.

In addition, both operators and customers require a card and PIN combination to access sensitive locker functions.

Lockers in a closed area can be installed with networked security door systems that communicate with the unit's central console, and allow customer access only if the customer has mail or a parcel waiting for them.

An uninterrupted power supply function is available for periods between 24 hours and three weeks in case of
