

# iForward Stock Locations (iFSL)

Fast moving and emergency parts can be stored in our network of over 300 iBoxes around the UK

## Key benefits

As well as providing an excellent delivery option, the iBox can be used as a mini Forward Stock Location (iFSL). Fast moving parts can be stored within a dedicated iBox door close to likely demand. All stocks are visible over the web so field based staff can confirm a required item is available before visiting the box.

## How it works

As engineers scan parts out of the iBox, stock levels are updated in real time to the ByBox servers; this in time can generate auto replenishment of the part from central stores overnight. Access to the iFSL can be granted to any of your engineers, this ensures that critical parts that may not be available from suppliers outside of normal 'opening hours' can be sourced reliably and quickly.

**We can manage your whole supply chain process from start to finish.**

## Financial considerations

- Do your engineers travel too far to collect their parts, using more time and fuel than they should? Do you want to reduce the stem mileage for engineers?
- Do you spend too much on stock holding at a central warehouse? Would it be of more use to keep fast moving parts out in the field?
- Do you want to reduce the number of missed SLAs?
- Do you want out of hours coverage without out of hours charges?
